

NEW GENERATION HEAVY DUTY V-BELTS

Introducing our new, exceptionally heavy-duty D-Section belt design. Made for demanding applications, particularly severe high shock load drives found in aggregate screeners featuring small back bending belt idlers.

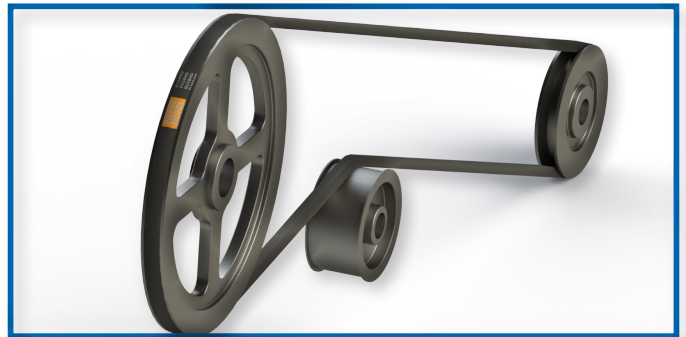

BELT DETAILS

New, special, heavy duty D-Section belts are designed especially for severe, high shock load drives on aggregate screeners with small (5.5" OD to 8.5" OD) flat back bending belt idlers.

- made with the highest quality heavy duty materials
- belt body material compounded to resist cracking, especially when belt is subjected to back bending
- multi-layered fabric wrap made to resist cracking and provide long wear resistance in extreme conditions
- oil and heat resistance to ARPM standards
- in extreme drive conditions and certified belt life tests, belt life has been shown to be 3 to 5 times the next best competitor's belt life
- exceptional value and outstanding performance at a competitive price point
- best in class uniformity and quality standards
- tensile cords engineered for extreme resistance to belt stretch

BELT DURABILITY

Heavy Duty D-Section belts run great even on drives with undersized backside idlers and back bending.

READY TO ORDER

Available in multiple sizes to fit your needs:

- D144HD
- D158HD
- D162HD
- D167HD
- D173HD
- D180HD
