

SOLVING INDUSTRY PROBLEMS

POULTRY BELTS

Only the best hold up in extreme conditions. Bestorq belts and service keep your poultry operation running at full capacity. Our robust inventory and expertise will help your plant save both time and money.

BELT DETAILS

- belts are designed to be durable and resistant to heat, steam, oil, hardening and glazing
- matches to tighter tolerances than ARPM and ISO standards for confidence in running maximum loads
- low maintenance means no rechecks or retensioning
- optional matched sets of 2 available
- popular stock sizes available and ready to order for dual sided timing, hex belts, and notched hex belts including: AA148, AA163, BB158, BB172, BB172N, D3280-8M-30, D3600-8M-30

CASE STUDY

A large poultry producer in Northwest Arkansas was experiencing belt life issues with their picker system. This was due to bird size variation, poor sheave condition, and lack of proper tension during hard starts. They were averaging only 3-5 days of belt life before failure.

BESTORQ SOLUTION

Bestorq worked with a large distributor to help solve the producer's issue with belt life on their defeathering system.

After a Bestorq belts training class, the maintenance department ensured proper belt tension, inspected sheave wear, and correctly installed new Bestorq belts.

After proper Bestorq belt installation, the belt life increased from 3-5 days up to 6 weeks on their system. This solution brought major cost savings and reduced down time.
